

NOTICE OF COMMENCEMENT OF PRELIMINARY INJURY INQUIRY

CERTAIN OIL AND GAS WELL CASING

The Canadian International Trade Tribunal gives notice that, pursuant to subsection 34(2) of the *Special Import Measures Act* (SIMA), it has initiated a preliminary injury inquiry to determine whether there is evidence that discloses a reasonable indication that the dumping of oil and gas well casing, as defined below (the subject goods), has caused injury or retardation or is threatening to cause injury, as these words are defined in SIMA. The subject goods are defined as:

Oil and gas well casing and green tube casing, made of carbon or alloy steel, welded or seamless, heat-treated or not heat-treated, regardless of end finish, having an outside diameter from 4 ½ inches to 9 ⅝ inches (114.3 mm to 245.2 mm), meeting or supplied to meet American Petroleum Institute (API) specification 5CT or equivalent and/or enhanced proprietary standards, in all grades, originating in or exported from the Republic of Austria, but excluding the following:

- drill pipe;
- pup joints;
- unattached couplings;
- coupling stock;
- insulated tubing and vacuum insulated tubing; and
- stainless steel casing containing 10.5 percent or more by weight of chromium.

For greater certainty, the product definition does not include oil and gas well tubing. It also does not include vacuum-insulated tubing, but it does include semi-finished casing, which is typically referred to as “green tubes” or occasionally “green pipes”. These green tubes, as they are most commonly referred to in the Oil Country Tubular Goods (OCTG) industry, are intermediate or in-process pipes which require additional processing, such as threading, heat treatment or testing, before they can be used as fully finished oil and gas OCTG in end-use applications. This product definition includes green tube casing (i.e., green tubes with the necessary characteristics and intended for finishing into casing) and does not include green tube tubing.

Pup joints, which are excluded from the complaint, are essentially short lengths of casing used for spacing in a drill string, which are excluded where their length is 12 feet or below (with a three-inch tolerance), as defined in the API 5CT specification.
